Muhd Safwan Zarif bin Ya'cob

Full Stack Developer

Cyberjaya, Selangor | 018-6644723 | msafwanzarif@gmail.com | safwanzarif.dev

SUMMARY

Full Stack Developer with 6+ years of experience delivering web and mobile applications end to end: requirements, database design, API development, UI implementation, integration, testing and deployment. Currently builds a multi-vendor booking platform with 500+ API endpoints and a 65+ page vendor CMS, with sub-2-minute deployments. Skilled at mentoring teammates and explaining technical concepts to non-technical stakeholders.

WORK EXPERIENCE

Full Stack Developer, Siiru Tech Sdn Bhd (Remote) *Oct 2025 – Present*

- Design, develop and maintain the backend of a multi-vendor booking service on Siiru's microservices architecture, covering six vastly different product types (Mutawwif, Transport, Waqaf, Visa, Insurance, Qurban), each with at least one vendor and more in development, including third-party integrations.
- Build and maintain 500+ API endpoints and 8 cron jobs; keep simple queries under 100 ms and heavy join and aggregate queries over thousands of records under 500 ms, including bulk inserts of 600+ rows in a single API call.
- Protect data integrity across multi-step booking flows with ACID-compliant transactions, and prevent double-booking of limited vendor inventory with locking and idempotency keys so concurrent and retried requests do not create duplicate bookings.
- Tuned a heavy query from almost 2 seconds to under 500 ms by redesigning it with effective subqueries.
- Secure APIs with JWT and OAuth authentication and role-based access control for three groups: Admin, App User (customer), and Vendor/Operator (Mutawwif, driver, transport company, Qurban vendor, Waqaf vendor, insurance admin).
- Use AI-assisted tools in the workflow: Claude for planning, and Codex and Antigravity for executing implementation from pseudocode, boilerplating, building MVPs and writing tests.
- Use Drizzle ORM for the vendor booking APIs and TypeORM across many of the other backend microservices, on MySQL.
- Review colleagues' code, and write and maintain the Swagger (OpenAPI) documentation that team members and contract freelancers rely on to build against the platform.
- Develop the new vendor CMS (Vue, TypeScript; 65+ pages, 40+ reusable components), maintain the Angular admin CMS (100+ pages, 40+ reusable components; 10+ pages built personally), and integrate the APIs with both and the Siiru mobile application (Angular, Ionic).
- Maintain 20+ repositories, each a microservice node with its own CI/CD pipeline; cut full deployment time from push to live from 10–15 minutes to under 2 minutes, with rollback through Docker image replacement in Kubernetes.
- Work with the design team in grooming sessions to keep UX implementation robust and aligned with technical requirements, raising gaps with clear options and plans.
- Represent Siiru in meetings with partner companies, aligning technical expectations on both sides.
- **Stack:** NestJS, Vue, Angular, Ionic (TypeScript), MySQL, Docker, Kubernetes, GitHub Actions, DigitalOcean

Full Stack Developer, iLaunch Sdn Bhd (Shah Alam) *Feb 2022 – Oct 2025*

- Developed and maintained full stack feedback, form and financial management systems for government entities, covering web and mobile, with Prisma ORM for data modelling and querying.
- Built testing into every project, reviewed colleagues' code, and ran an application testing workshop on Selenium IDE.
- Researched and built new and custom features and third-party integrations; shared internal how-to guides that cut team development time by 20%.
- Led developer teams as Scrum Master, improving team cohesion and communication with the project manager and raising velocity by 10%.
- Trained five groups of university interns across the full development workflow (requirements, full stack development, manual and automated testing, debugging, deployment) using JIRA and Notion.
- Ran a web development workshop for the client introducing the project technologies.
- **Stack:** NestJS, Node.js, Prisma, Spring Boot, Vue, Flutter, MySQL, OracleDB, Selenium

Azure Innovations Sdn Bhd, Kuala Lumpur *Mar 2020 – Jan 2022*

Technical Team Lead *Apr 2021 – Jan 2022*

- Led a multinational team, including senior engineers, delivering new features and maintaining web and mobile applications for a major Malaysian telco, working with colleagues in Pakistan and the Philippines.
- Designed and built an e-commerce implementation, an ads and rewards system, a Buy Now Pay Later implementation and a courier service integration.

- **Stack:** Node.js, Laravel (PHP), React Native, MySQL, MongoDB, AWS EC2, JIRA

Backend Developer *Mar 2020 – Mar 2021*

- Built data management and computation solutions for an inventory and content management system for B2B clients.
- Handled on-call reports and incident responses with prompt analysis and debugging, meeting 100% of deadlines and SLAs.
- **Stack:** Laravel (PHP), Node.js, React Native, MySQL, MongoDB, AWS EC2

EDUCATION

Multimedia University, Cyberjaya *July 2021*

Bachelor of Computer Science (Hons.) Specializing in Information Systems. GPA 3.71/4.0. Book Award recipient; Best Final Year Project (Information Systems).

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- Microsoft Certified: Azure Fundamentals

SKILLS

Languages: TypeScript, JavaScript, Java, PHP, Python, C++
Backend: Node.js, NestJS, Spring Boot, Laravel, Swagger/OpenAPI
Frontend and mobile: Vue, Pinia, React, Nuxt, Vite, Angular, Ionic, Flutter, React Native, Expo
Databases and ORMs: MySQL, PostgreSQL, MongoDB, OracleDB, Firestore; Prisma, TypeORM, Drizzle
Cloud and DevOps: AWS, Azure, GCP (personal projects), DigitalOcean, Docker, Kubernetes, GitHub Actions, Jenkins, NGINX
Security and data integrity: JWT, OAuth, RBAC, ACID transactions, locking and idempotency
Testing: Jest, Vitest, Playwright, Selenium
AI-assisted development: Claude, Codex, Antigravity
Practices: Agile/Scrum, mentoring, technical communication, R&D
Languages spoken: English (fluent), Malay (native), Japanese (basic)
